

Jason Sung

Aim to become a Tasteful Software Engineer

Served as a delivery engineer at Alibaba, participating in the construction of internal efficiency platforms, providing front-end solutions for delivery projects externally, and writing code to achieve service fulfillment.

During university, often served as the project team leader, responsible for and participated in the design and front-end development of multiple applications, gaining experience in coordination, planning, and collaborative communication. Passed CET-4 and CET-6. Received school-level scholarships in all academic years.

Projects

yunqiao-platform React

Yunqiao Industrial Digital Component Center

As the front-end lead, participated in the development and maintenance of Yunqiao Workshop and Yunqiao Asset Market, and contributed to the baseline development and customized development of the commercial version. Improved the user experience and optimized the performance of the Domain-Driven Design diagram editor in Yunqiao Workshop

https://gts.work/portal/yunqiao

qianyunyigou-weapp Weapp

Qianyunyigou

Guiyang Airport delivery project, a collaborative promotional activity platform for automotive and liquor companies. As the front-end lead, completed the development, integration, and launch of the mini-program, and participated in regular iterations and maintenance

#小程序://黔云易购/fXsLIa1FZaiyCzC

scysej-client-weapp React

Yunshangyijia

Undertook the Mini Program 2.0 version UI upgrade requirements, fully responsible for restoring the front-end design drafts and integration work, fixing known issues, and optimizing user experience

https://www.scysej.com

startrails-dag-editor React

Startrails Lightweight Task Scheduling Tool

A lightweight task scheduling tool based on AntV X6 that arranges server-side task execution logic via drag-and-drop. Supports multiple execution modes including serial and parallel, supports editing different task nodes such as Shell and Python, and supports validity checking and automatic node arrangement

damo-official React

Alibaba DAMO Academy Official Website

Participated in the official website upgrade project in collaboration between DAMO Academy and Yunqiao, responsible for the transformation and development of the login/registration module and personal account management module

https://damo.alibaba.com

Contributions

hexo-theme-archer JavaScript

A Modern Hexo Blog Theme

As a collaborator, developed new features including dark mode, improved mobile page adaptation, fixed community issues, and helped the theme become better. The repository currently has over 1.6k stars on GitHub

https://github.com/fi3ework/hexo-theme-archer

mdimg Node

Convert Markdown to Image

Allows custom templates to convert input Markdown or HTML documents into images that suit your preferences

https://github.com/LolipopJ/mdimg

dupimg-finder Electron

Duplicate Image Finder

An Electron application based on EfficientIR that supports finding duplicate image pairs and searching for similar results of a specified image

https://github.com/LolipopJ/dupimg-finder

gitalk-react React

Modernization of Gitalk Component

Reimplemented the Gitalk component based on React, TypeScript, and Vite, providing a better development experience and adding more features, including automatic folding of long comments

https://github.com/LolipopJ/gitalk-react

design-patterns-for-humans-zh

Design Patterns for Humans (Chinese Translation)

The Chinese translation of the open-source repository design-patterns-for-humans, for reference when learning design patterns

https://github.com/LolipopJ/design-patterns-for-humans-zh
